DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The following expression lack antecedent basis:

In claim 1, line 10 "the holding time".

In claim 2, line 3 "the holding time".

In claim 3, line 3 "the holding time".

In claim 5, lines 10-11 "the holding time".

In claim 6, line 10-11 "the holding time".

In claim 7, line 11-12 "the holding time".

In claim 9, line 10 "the holding time".

In claim 11, line 10 "the holding time".

Allowable Subject Matter

4. Claims 1, 5-7, 9, and 11 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

Art Unit: 2853

Claims 2-3 will be allowed when claim 1 is rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

Claim 8 will be allowed when claim 7 is rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

Claim 10 will be allowed when claim 9 is rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

5. The following is a statement of reasons for the indication of allowable subject matter:

The combination of a change step for changing a held portion of the recording medium held by the holding member when the holding time in the holding step exceeds a predetermined time, recited in claim 1. This invention solves the problem of preventing or reducing contamination of a recording medium caused by a recording medium conveying unit, regardless of the type of recording medium. It is this combination, which is not taught or suggested in the prior art, which make the claims allowable over the prior art.

The combination of a cut-off step of cutting off a contaminated portion of the recording medium due to holding of the recording medium by the holding member when the holding time in the holding step reaches a predetermined time before performing an image formation, recited in claim 5. This invention solves the problem of preventing or reducing contamination of a recording medium caused by a recording medium conveying unit, regardless of the type of recording medium. It is this combination, which

Art Unit: 2853

is not taught or suggested in the prior art, which make the claims allowable over the prior art.

The combination of a conveyance step for conveying a contaminated portion of the recording medium due to holding of the holding time in the holding step reaches a predetermined time as well as a non-contaminated portion continuous to the contaminated portion, so that image formation is performed on a portion after the conveyed portion, recited in claim 6. This invention solves the problem of preventing or reducing contamination of a recording medium caused by a recording medium conveying unit, regardless of the type of recording medium. It is this combination, which is not taught or suggested in the prior art, which make the claims allowable over the prior art.

The combination of a holding force change step of changing a holding force of the recording medium by the holding member, so as to change an intrusion amount of the holding member into the recording medium when the holding time in the holding step reaches a predetermined time, recited in claim 7. This invention solves the problem of preventing or reducing contamination of a recording medium caused by a recording medium conveying unit, regardless of the type of recording medium. It is this combination, which is not taught or suggested in the prior art, which make the claims allowable over the prior art.

The combination of a holding force release step for releasing holding of the recording medium by the holding member when the holding time in the holding step reaches a predetermined time, recited in claim 9. This invention solves the problem of

Art Unit: 2853

preventing or reducing contamination of a recording medium caused by a recording medium conveying unit, regardless of the type of recording medium. It is this combination, which is not taught or suggested in the prior art, which make the claims allowable over the prior art.

The combination of a conveyance/holding step for conveying the recording medium and holding a non-image portion by the holding member when the holding time in the holding step reaches a predetermined time, recited in claim 11. This invention solves the problem of preventing or reducing contamination of a recording medium caused by a recording medium conveying unit, regardless of the type of recording medium. It is this combination, which is not taught or suggested in the prior art, which make the claims allowable over the prior art.

6. Claims 12-24 are allowed.

7. The following is a statement of reasons for the indication of allowable subject matter:

The combination of a control means for performing control in such a manner that a contact portion of the recording medium held by the holding member is maintained only for a predetermined time and is changed to another contact portion from time to time, recited in claim 12. This invention solves the problem of preventing or reducing contamination of a recording medium caused by a recording medium conveying unit, regardless of the type of recording medium. It is this combination, which is not taught or suggested in the prior art, which make the claims allowable over the prior art.
